Question 1. (Single Select)

What configuration step is required for booting the Session Border Controller from an external FTP server?

- A: Navigate to the bootparams configuration branch and set the host inet field to the IP address of the external BOOTP Server from which the Session Border Controller can boot.
- B: Navigate to the system configuration branch and set the ip address field of the wancom1 management interface.
- C: Navigate to the bootparams configuration branch and set the ip address field of the destination SIP device with which the Session Border Controller needs to interact.
- D: Navigate to the system configuration branch and set the ip address field of the wancom0 management interface.
- E: Navigate to the bootparams configuration branch, set the host inet or Host IP, FTP username, and FTP password for the external FTP Server in which the image file resides.

Answer: C

Question 2. (Multi Select)

Which two functionalities are provided by Session Border Controllers?

- A: they span multiple networks and provide edge proxy functions between them
- B: they are session-aware devices that enable control of end-to-end interactive communications across PSTN network borders
- C: they enable premium interactive services across IP network borders by complementing existing edge routers
- D: they provide routing functions for IP, TCP, and SMTP using application parameters.
- E: they replace typical edge routers and firewalls in order to provide a unified network border for signaling and media control

Answer: A, C

Question 3. (Single Select)

Which action triggers the 180 Ringing response in a User Agent Client (UAC)?

- A: the subscription to a SIP presence service
- B: the generation of a remote ring-back tone
- C: the generation of a local ring-back tone
- D: the establishment of a SIP session
- E: the termination of a SIP session

Answer: C

Question 4. (Multi Select)

Which two statements describe the functions of Session Border Controllers?

- A: they provide signaling proxy functions for SIP, H.323, and MGCP, which includes access control, signaling constraints, and topology hiding
- B: they replace typical edge routers and firewalls in order to provide a unified network border for signaling and media control
- C: they are session-aware devices that enable control of end-to-end interactive communications across IP network borders
- D: they provide routing functions for IP, TCP, and SMTP using application parameters
- E: they are based on the Windows operating system

Answer: E, A

Question 5. (Single Select)

You are configuring a sip-interface configuration element. You encounter the error message: Error 409 saving configuration SipInterface.

Identify the cause of the error.

- A: You are creating a sip-port element with the same address parameter value of another sip-port.
- B: You are creating a sip-port element with the same port parameter value of another sip-port.
- C: You are creating a sip-port element with the same transport-protocol parameter value of another

sip-port.

D: You are creating a sip-interface element with a different realm-id parameter value of another sip-interface.

E: You are creating a sip-interface element with the same realm-id parameter value of another sip-interface.

Answer: B
